YOUR AUTHORIZED DEALER

Colors are matched as closely as possible to our standards. Colors may be affected by age, light and texture.

The color selector is designed to assist you in making your selection for CTI's Reflective Flooring Additive colors. CTI's Reflective Flooring additive colors are measured by weight (not volume) and are designed to be added to 100% solids epoxy. 1-4 pigment packs should be added per gallon of epoxy base, depending on the look desired. Mix thoroughly for 3 minutes to insure proper dispersion. CTI's Reflective Flooring may be used in other clear vehicles such as polyurethane, acrylic sealers and waterborne epoxies all with different effects.

To ensure proper color, the entire contents of the CTI's Reflective Flooring Additive should be used. Be sure to thoroughly read all application data on whatever vehicle you are adding the CTI's Reflective Flooring Additive to. Due to reproduction limitations, it is necessary that we reserve the right to allow for reasonable variations of application. Printed colors show approximate color without effect of dispersing techniques, finishing techniques or application procedure. Variation of application will also affect the final appearance
